

# THE REMANUFACTURING PROCESS

## Perfect screens

The remanufacturing process ensures that all screens are free from pressure marks and scratches - no exceptions and no compromise.

## Cosmetic renewal

Each laptop is dismantled into its major parts. Covers, palm rests, bezels and keyboards are all fully repaired and repainted. We repaint in matt, gloss and soft touch finishes to match that of the original laptop.

## Durable keyboards

We do not just reprint keyboards - our unique process of repainting means you do not have to worry about keys fading or paint chipping.

## Attention to detail

Replacing components and details like broken or worn feet underneath the laptop is all part of the remanufacturing process.

## BS 8887 remanufacturing process

Each unit goes through a rigorous 5+ hour process. The stages of our 360-point stage accredited remanufacturing process include:

- Initial inspection
- Disassembly
- Component inspection
- Component remediation
- Cosmetic remediation
- Component replacement and upgrades
- Reassembly and functional testing
- Finishing visual inspection and quality control checks
- BS 8887 accredited processes guarantee consistent remanufactured quality in large volumes

## Track Pad

No signs of use or fading that you would expect with a refurbished laptop.

## Inside and outside

Alongside cosmetic refinishing, every unit is fully tested at component level - any worn or broken components are replaced or upgraded.
